Smartsheet approved domain sharing list

Users will no longer be able to publish sheets, reports, or dashboards outside of the publishing configurations identified in the Admin Center, the console for System Admins. Manage Authentication Options Account Level Control System Admin Configured Governs users accessing Smartsheet for the first time or users accessing accounts outside of the primary or designated enterprise account. Users will no longer be able to collaborate with external parties not explicitly defined in the allow-list (domain-specific) in the approved domain sharing control. The System Admin is able to generate a higher-privileged token that allows for a number of specific API calls not accessible to general users. Approved Domain Sharing - Email Level Account Level Control System Admin Configured Governs who sheets can be shared to and to whom notifications can be sent to at the email address level. Users will receive a backup of the sheets specified in CSV file format providing the raw data offline. Users not on the account (external collaborators) are not able to be added to the account when this setting is configured to Limited to Account Users Only. Enabled Attachment Sources Account Level Control System Admin Configured Governs the attachment sources that can be used to place attachments or links to an attachment within the sheet attachment column. Automated User Provisioning Account Level Control System Admin Configured Governs users accessing Smartsheet for the first time or users accessing accounts outside of the primary or designated enterprise account. Note: The implementation of this control is permanent in its effect when publishing is disabled. Hello, Trying to figure out how to share a doc with someone outside of my domain area? Thanks in advance. Khwaja Hi all, As an Admin I would like to run a report to establish what external users have been given access to our content. All external users have to be in the approved domain sharing list, however what are they accessing? Thanks Gavin The following matrix identifies available administrative controls in the Smartsheet service. It does not extend to users placing hyperlinks directly within cells. Sheet Access Report Account Level Control System Admin Configured Governs the review of the sheet inventory of the account and provides access information for assets within an account. Users will be limited to the selected In-App chat provider. As part of an off-boarding process, this control removes all of the sharing rights granted to this user. Account Login History Account Level Control System Admin Configured Governs the review of user logins during the previous 6 months. Users will only be able to attach files from approved sources. The System Admin on the account is able to complete a periodic review of logins to ensure that they are appropriate and in accordance with an organization's policy. Sheet-Level Scheduled Backup User Level Control User or System Admin Configured Governs the ability to create periodic offline backups on specific sheets. Group Membership Settings Account Level Control System Admin Configured Governs the type of user who can be added to a group by Group Admins. Chat Integrations Account Level Control System Admin Configured Governs the available chat integration for users attempting to integrate with a chat platform. Note: This is an optional setting during account deletion. Transfer Sheet Ownership Account Level Control System Admin Configured Governs the ownership of an asset during the decommissioning process for users from a Smartsheet account. Note: If an external authentication service is in use, such as Single Sign-On (SSO), this login history will only identify the successful logins by users in the SSO service; failed login attempts are not passed by the SSO service. Users with an email domain that matches a domain validated account will be added to that account during their first login or next login if previously on another account. This control is a sub-control within the Approved Domain Sharing feature. General users and System Admins are able to generate API tokens at will. API tokens generated by each user will obey that user's permissions granted in the web application. Customers are responsible for configuring such controls in accordance with any internal security, compliance, privacy, or regulatory requirements. RESTful API User and Account Control User or System Admin Configured General users of the platform are able to generate API tokens that will grant them access to the API at the same level as their rights within the web-application. Global Publishing Control Account Level Control System Admin Configured Governs publishing functionality for sheets, reports, and dashboards across the account. As part of an off-boarding or change of role, this control will transfer ownership of sheets, reports, or dashboards owned by the user helping to ensure proper asset lifecycle management. Remove All Shares for a Specific Email Account Level Control System Admin Configured Governs the sharing rights associated with a user during the decommissioning process from a Smartsheet account. Approved Domain Sharing - Domain Level Account Level Control System Admin Configured Governs who sheets can be shared to and to whom notifications can be sent to at the domain-level. The System Admin on the account is able to identify an inventory of assets and ensure that sharing is appropriate. Custom Welcome Screen Account Level Control System Admin Configured Governs the ability to provide users a welcome message or banner. Users with an email domain that matches a domain validated account will be added to that account during their first login or next login if previously on another account. Users will no longer be able to collaborate with external parties not explicitly defined in the allow-list (email address-specific) in the approved domain sharing control. By default, the chat integration capabilities are not enabled. Check the box to remove user sharing access, which will remove the user from sharing all sheets owned by other licensed users on the account. This extends from sharing to sending row-level information and update requests. Users are presented with a welcome message that could be used to display an acceptable use message or request consent/affirmation for the usage of the platform prior to login. Note: The formatting that is present in the platform is lost during the export process. Smartsheet does not configure these controls on behalf of customers and the controls referenced are reflective of those available on an enterprise account without any additional premium features.
