Trademarks Brother and the Brother logo are registered trademarks and BRAdmin Professional is a trademark of Brother Industries, Ltd. UNIX is a registered trademark of The Open Group. If you have any comments or suggestions, please write to us at In Europe European Technical Services 1 Tame Street Audenshaw. Service center locations Canada For the location of a Brother authorized service center, call 1877BROTHER. Internet addresses Brother Global Web Site For Frequently Asked Questions FAQs, Product Support and Technical Questions, and Driver Updates and Utilities B2 Brother numbers for Europe and other countries. B3 Register your product. B3 Frequently asked questions FAQs. B3 Customer service. B3 Service center locations. B3 Important information Regulations. B4 Caution for LAN connection. B4. To use the Brother printer through a network, you need to configure the print server, and set up the computers you use. In this chapter, you will learn the basic concept of the network connection and protocols, and in Chapter 2 you will read information on network configuration. This type of computer is often called a "server" or a "print server". Its job is to access print jobs from other computers and then control the printing of these jobs. This function allows the print server to communicate with other devices by using its DNS name. For information on how to change the IP address, see Setting the IP address and subnet mask on page 23. Using the control panel to configure your machine for a network for HL5270DN You can configure your network printer using the control panel Network menu. Select the print server which you want to configure, in the right frame of the main BRAdmin window. The NetBIOS name can be seen in the printer settings page.http://globewheelers.com/userfiles/cycleops-jet-fluid-pro-manual.xml

Now that you have configured the port, you must specify which printer driver you wish to use. Select the appropriate driver from the list of supported printers. If you are using a driver supplied with the printer on CDROM then select the Have Disk option to browse to the CDROM. Select the desired directory to install the Brother PeertoPeer Print LPR files and click Next. The installation program will create the directory for you if it does not already exist on your disk. Select My Computer not Network Printer and click Next. Select the Brother LPR Port the port name you assigned in step 7 of the "Installing Brother PeertoPeer Software" section in this chapter and click Next. Instead, go to the Start button, select Settings, and open the Printers window. Click the icon of the printer that you wish to configure, select File from the menu bar, and then Properties. Select the desired option and click Next. Select the Brother LPR port the port name you assigned in step 7 of the Installing the Brother PeertoPeer software on page 35 and click Next. Instead, go to the Start button, select Settings, and open the Printers window. Click the icon of the printer that you wish to configure, select File from the menu bar, and then Properties. If you need to change name, you can configure the Brother print server to recognize this. There are three ways of doing this. If you are unsure about the name of your workgroup or domain, look in the identification tab in your network applet. Start the CDROM installation menu program according to the printer Quick Setup Guide. Select the desired option and click Next. Select the Brother NetBIOS Port the port name you assigned in step 7 of the "Installing the Brother NetBIOS Port Monitor" section and click Next. Select the Brother NetBIOS Port the port name you assigned in step 7 of the "Installing the Brother NetBIOS Port

Monitor" section and click Next. Select the correct driver. Click Next when you are done.http://www.drukomania.pl/userfiles/cycleops-joule-gps-manual.xml

After successful communication you will see the model name of the printer automatically. If you are using the built in service names that the Brother print server supports, you can also use the following However, please note the Get More Info option will not display any printer data. You do not need to manually configure any IP address or network strings within the printer as the printer will automatically configure itself. Select Brother HLXXXX series where XXXX is your model name and then click Add. Click the printer, then click Make Default to set the printer as the default printer. The printer is now ready to print. And then, double click the BRAdminLight.jar file. Select the print server which you want to change the settings. Restore the network settings to factory default See Restoring the network settings to factory default on page 77 for information on how to restore the network settings to factory default. Press Set, and then press Set again to print the Printer Settings Page. Please follow these steps For HL5250DN For HL5250DN, the print server is automatically reset back to its default factory settings when you disable the APIPA protocol. Turn off the printer. Check the following Make sure that the printer is powered on, is online and ready to print. Brother print servers have two LEDs on the back panel of the machine.If it is visible, then the connection is good. Otherwise, go to Step 5. Then, click 5 Once your firewall is disabled, try reinstalling the Brother software package. For instructions on how to install from the CDROM, use the Quick Setup Guide we have provided with the machine. If it is visible, then the connection is good. Otherwise, go to Step 4. If the waiting time of your print job exceeds a certain limit, a time out situation occurs, which causes the error message.

The Brother print server provides the following predefined services do a SHOW SERVICE command in the Brother print server remote console to see a list of available services Enter HELP at the command prompt for a list of supported commands. Using APIPA to configure the IP address The Brother print server supports the Automatic Private IP Addressing APIPA protocol. With APIPA, DHCP clients automatically configure an IP address and subnet mask when a DHCP server is not available. The ARP command only works once. For security reasons, once you have successfully configured the IP address of a Brother print server using the ARP command, you cannot use the ARP command again to change the address.
